I'm happiest when I'm deep in a problem I haven't solved before. These days that means building AI agents that do real work. At SuperOrgs I built Orion, an AI analyst teammates rely on to understand their agents and spending, and it is live with customers. I also built Saaya, a persistent AI coworker with durable jobs and approval gates. I design the systems, ship them, and keep them running in production.

TECHNICAL EXPERIENCE

Forward Deployed Engineer

Jun 2026 – Present

SuperOrgs (Early-Stage Startup)

Remote

Own AI agent features end to end, from scoping with customers through architecture, code review, and the launch post.

- Built Orion, an AI assistant that answers plain-English questions about a team's people, agents, and spending, and scans their Slack, Asana, and Linear to suggest new agents worth building, each tied to the source behind it.
- Built connectors that find the AI agents a customer already runs on tools like Dust and Gumloop, map them onto the org chart, and pull in real cost data, plus an MCP server that gives Claude access to the same data.
- Built the Stripe billing that let customers sign up and pay on their own for the first time, with access updating automatically on every plan change, then added usage-based metering, per-company spending caps, and a per-customer profit dashboard.
- Built the AI Services marketplace end to end: a managed provider catalog, buyer hiring requests backed by signed statements of work, and a portal where outside providers confirm their fees, with every payment step logged.

Student Technical Project Manager

Jan 2026 – May 2026

Infrastructure and Computing Office, Gettysburg College

Gettysburg, PA

- Processed campus WiFi scan data with Python and Pandas to locate coverage gaps across 30+ buildings.
- Automated the manual tracking and scheduling workflow, leading a 3-member team and an external vendor.

Student Software Developer

Aug 2025 – Dec 2025

Impact Rehab

Gettysburg, PA

- Worked directly with clinicians to turn hand-scored musculoskeletal assessments into a production PHP and MySQL app with validated scoring and Chart.js dashboards.
- Led a 3-member team through development, testing, and clinical deployment.

Web Development Intern

May 2025 – Aug 2025

Enlisted Association of the National Guard (EANGUS)

Washington, DC

- Built a custom WordPress plugin in PHP, JavaScript, and MySQL for a national nonprofit, centralizing 1,000+ leadership records across five directories and cutting lookup time by about 30 percent.
- Scoped the requirements with the client and built admin forms non-technical staff maintain themselves.

PROJECTS

Saaya: Persistent AI Coworker

[Code](#)

- A persistent AI coworker built on LangChain Deep Agents and LangGraph: durable jobs that survive crashes, approval gates that genuinely block risky commands, and long-term memory with provenance and versioning, across web, Slack, and MCP. Built with Python, FastAPI, Next.js, and Postgres/pgvector.

Forge & Autonomous “Minions”

[Demo](#) | [Code](#)

- TypeScript agent system on the Claude API that compiles a plain English spec into a tool-using agent, then repairs it through a build, run, judge, and refine loop. Autonomous minions resolve GitHub and Linear issues, run tests in a sandbox, and open a PR only after a verification gate passes; a labeled evaluation set measured zero unsafe ships, with per-step tracing and memory of prior repairs.

CLIENT-FACING & LEADERSHIP

- **Resident Assistant & Coordinator, Gettysburg College (Aug 2023 – May 2026).** Supervised and mentored 6 resident assistants and supported 100+ first-year students through community programming and difficult conversations that helped them navigate academic and residential challenges.
- **Tour Guide & International Student Ambassador, Gettysburg College (Feb 2023 – May 2026).** Represented the college to prospective students and families, fielding hard questions live and handling them with confidence.

EDUCATION

Gettysburg College

Aug 2022 – May 2026

B.S. Computer Science; Minor in Mathematics; Minor in Data Science

Gettysburg, PA

Honors: Eisenhower Scholar, Keith Pappas Memorial Award, Linnaean Award, Pi Mu Epsilon, Dean's Honors List

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java
eval harnesses, tracing & observability, guardrails, RAG
Next.js, Node.js, Docker, CI

AI / Agents: Claude API, MCP, LangGraph, agent evaluation &
Systems: Postgres, pgvector, Supabase, Drizzle ORM, FastAPI,
