

SALEHA IFTIKHAR

+1 (718) 551 5561 | salehaiftikharrr@gmail.com | [LinkedIn](#) | [GitHub](#)

AI-native engineer who ships fast with agentic coding workflows and owns the architecture others build on.

EDUCATION

Gettysburg College

Aug 2022 – May 2026

Bachelor of Science, Computer Science; Minor in Mathematics; Minor in Data Science

Gettysburg, PA

- **Achievements:** Eisenhower Scholar, Dean's Honors List, Pi Mu Epsilon (Math Honor Society), Keith Pappas Memorial Award (Fall 2025), Linnean Award (Spring 2026)
- **Coursework:** Data Structures & Algorithms, Databases, AI, Data Science Programming, Linear Algebra, Probability & Statistics

SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, Ruby, PHP, SQL, HTML, CSS
- **Frameworks & Libraries:** React, Next.js, Ruby on Rails, Express.js, Node.js, Bootstrap, Tailwind CSS, Streamlit, Chart.js
- **Databases & ML:** PostgreSQL, MySQL, Supabase, NumPy, Pandas, Seaborn, scikit-learn
- **Cloud, DevOps & Testing:** Docker, Kamal, CI/CD, Git, REST APIs, JWT, RSpec, RuboCop, Jest
- **AI & Agentic Coding:** Claude Code, Cursor, agentic coding workflows, prompt-driven development

TECHNICAL EXPERIENCE

Software Engineer

Jun 2026 – Present

SuperOrgs

Remote

- Build a unified department-management dialog in React and TypeScript (Drizzle, PostgreSQL) that pulls member counts, bulk-archive, and mass reassignment into one screen, replacing several disconnected admin menus
- Fix a multi-tenant notifications feed surfacing wrong items and inflated counts by moving filtering to the database query layer, restoring accurate, tenant-scoped data
- Take on bigger scope and ship faster by driving agentic coding workflows (Claude Code), owning architecture and final review behind CI gates that catch issues before merge

Technical Project Manager

Jan 2026 – May 2026

Infrastructure and Computing Office at Gettysburg College

Gettysburg, PA

- Coordinated campus-wide WiFi analysis by scheduling scans, managing building access, and leading a 3-member team with Velaspan, using Ekahau and Python (NumPy) to process data, which informed upgrades that improved network reliability
- Automated permission-tracking and data-collection scheduling workflows for network site surveys across 30+ buildings using Python scripts and Pandas, which reduced manual effort and shortened survey preparation time
- Facilitated student feedback sessions to identify connectivity issues and translated user insights into actionable recommendations for network improvements

Software Developer

Aug 2025 – Dec 2025

Impact Rehab

Gettysburg, PA

- Engineered a full-stack physiotherapy app using PHP, JavaScript, and MySQL, automating MSK score calculations that previously required manual entry
- Implemented JWT authentication, session management, and real-time analytics dashboards with Chart.js, cutting clinician reporting time
- Led a 3-member team through the full SDLC, designing an ER-modeled database, deploying the application, and coordinating client communication to deliver the product on schedule and meet all client requirements

Web Development Intern

May 2025 – Aug 2025

Enlisted Association of the National Guard – EANGUS

Washington, DC

- Developed a custom WordPress plugin with PHP, JavaScript, and MySQL that centralized management of 1,000+ leadership records across five directory sections, enabling secure admin forms and dynamic shortcodes, which reduced record-lookup time by about 30%
- Streamlined data workflows and asset management, improving record accuracy and reducing manual content updates by consolidating 5 separate processes into one admin interface
- Enhanced digital outreach for a national advocacy organization by creating responsive web pages with TypeScript and Next.js and adding interactive data visualizations using Chart.js, broadening stakeholder reach

Software Engineer Intern (Part Time)

May 2025 – Aug 2025

The Tone Core

Remote

- Developed core features for a production Rails 8 + Hotwire trading platform, enabling real-time trades and live notifications for 500+ beta users
- Reduced multi-step trade flow friction by redesigning UX with Tailwind CSS, lifting user engagement
- Built and maintained a CI/CD pipeline using Docker and Kamal, wrote RSpec tests, and enforced code quality via RuboCop

PROJECTS

Personal Projects | Next.js, TypeScript, React, PostgreSQL, Supabase, Vercel AI SDK, Chrome MV3, Docker

Mar 2026 – May 2026

Self-directed full-stack builds

Gettysburg, PA

- Designed a chat-native BI tool that turns natural-language questions into streamed charts and KPI cards, with an LLM generating validation-gated single-SELECT SQL over a read-only PostgreSQL role and a swap-in-config Claude/GPT provider, fully dockerized
- Shipped a full-stack job tracker with auth, filterable tables, and persistent state, plus a Chrome MV3 extension that scrapes postings from 6 ATS platforms (LinkedIn, Greenhouse, Lever, Ashby, Workday, SmartRecruiters) into a profile-based autofill engine

EXTRACURRICULAR

Science and Innovation Research Undergraduate Fellow, Eisenhower Institute

Aug 2025 – May 2026

- Selected senior fellow leading year-long public policy programming on science and innovation across Gettysburg, D.C., and Japan

Student Representative, Student Life Committee

Aug 2025 – May 2026

- Represented the undergraduate student body in institutional governance discussions on student life and conduct policy

Residential Assistant (RA) & Residential Coordinator (RC), Office of Residential Education

Aug 2023 – May 2026

- Supervised 6 RAs and supported 35+ first-year students through mentorship, community meetings, and conflict resolution

Campus Tour Guide & International Student Ambassador, Admissions Office

Feb 2023 – May 2026

- Guided campus tours and info sessions for prospective students and families as a student ambassador for the College
